

Energetics Technology Ltd

Halo80

Category: Litter Bins

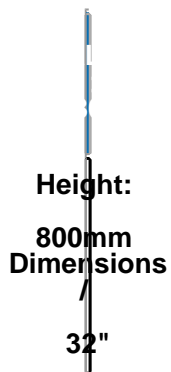

Description

The Halo80 has a high charge capability and is designed to work even when the explosive device detonates near the side or bottom of the unit. It provides 360° blast mitigation protection from explosive fragmentation. Blast overpressure is reduced via our SABREMAT technology. Main characteristics; very low maintenance cost, large litter capacity using standard refuse sacks, self draining for external use, a covered option is available, provided in a variety of colours and finishes and also comes with bolt down mounting for extra safety.
